HOUSEHOLD ENERGY SAVING TIPS

Generate heat via cleaner fuels and more efficient systems (consider condensing boiler, heat pumps, solar thermal panels)

Retain heat with extra insulation, double glazed windows and thermal curtains

Control heat by setting central thermostats at max 20°C and thermostatic valves at medium settings

CHECK TWICE A YEAR:

Radiators for possible air locks

Water tank and pipes for potential leakage

Vents, window and door sealings

Temperature of the water boiler: 65°C is enough

Save up to
80%
on your heating bill
